

LAB - 3

22/1/24

- 1) WAP to implement singly linked list with following operations.
- a) Create a linked list.
 - b) Insertion of a node at 1st position, at any position and at end of list.
 - c) Display the contents of the linked list.

```
#include <stdio.h>
#include <stdlib.h>
#include <conio.h>
#include <malloc.h>

struct node
{
    int data;
    struct node *next;
};

struct node *start = NULL;
struct node *create_ll (struct node *);
struct node *display (struct node *);
struct node *insert_beg (struct node *);
struct node *insert_end (struct node *);
struct node *insert_before (struct node *);
struct node *insert_after (struct node *);
```

```
int main()
```

{

```
int choice;
```

```
printf("\n *** main menu ***\n 1. create linked list
```

```
 2. display  3. insert_beg  4. insert_end
```

```
 5. insert_before  6. insert_after");
```

```
do
```
